

RG50xQ&RM5xxQ Series 5G

Network Status Judgement

Introduction

5G Module Series

Version: 1.0

Date: 2021-06-10

Status: Released

Our aim is to provide customers with timely and comprehensive service. For any assistance, please contact our company headquarters:

Quectel Wireless Solutions Co., Ltd.

Building 5, Shanghai Business Park Phase III (Area B), No.1016 Tianlin Road, Minhang District, Shanghai 200233, China

Tel: +86 21 5108 6236

Email: info@quectel.com

Or our local office. For more information, please visit:

<http://www.quectel.com/support/sales.htm>.

For technical support, or to report documentation errors, please visit:

<http://www.quectel.com/support/technical.htm>

Or email to support@quectel.com.

General Notes

Quectel offers the information as a service to its customers. The information provided is based upon customers' requirements. Quectel makes every effort to ensure the quality of the information it makes available. Quectel does not make any warranty as to the information contained herein, and does not accept any liability for any injury, loss or damage of any kind incurred by use of or reliance upon the information. All information supplied herein is subject to change without prior notice.

Disclaimer

While Quectel has made efforts to ensure that the functions and features under development are free from errors, it is possible that these functions and features could contain errors, inaccuracies and omissions. Unless otherwise provided by valid agreement, Quectel makes no warranties of any kind, implied or express, with respect to the use of features and functions under development. To the maximum extent permitted by law, Quectel excludes all liability for any loss or damage suffered in connection with the use of the functions and features under development, regardless of whether such loss or damage may have been foreseeable.

Duty of Confidentiality

The Receiving Party shall keep confidential all documentation and information provided by Quectel, except when the specific permission has been granted by Quectel. The Receiving Party shall not access or use Quectel's documentation and information for any purpose except as expressly provided herein. Furthermore, the Receiving Party shall not disclose any of the Quectel's documentation and information to any third party without the prior written consent by Quectel. For any noncompliance to the above requirements, unauthorized use, or other illegal or malicious use of the documentation and information, Quectel will reserve the right to take legal action.

Copyright

The information contained here is proprietary technical information of Quectel. Transmitting, reproducing, disseminating and editing this document as well as using the content without permission are forbidden. Offenders will be held liable for payment of damages. All rights are reserved in the event of a patent grant or registration of a utility model or design.

1 Introduction

The document introduces the basic concepts of 5G network and network-status-related AT command supported by Quectel RG500Q series, RG502Q-EA, RM500Q series, RM502Q-GL and RM510Q-GL modules to provide users with the approach to judge whether the module registers on 5G network, further displaying network status through a 5G icon for end users.

1.1. Applicable Modules

Table 1: Applicable Modules

Module Series	Model
RG500Q	RG500Q-EA
RG502Q	RG502Q-EA
RM500Q	RM500Q-GL
	RM500Q-AE
RM502Q	RM502Q-GL
RM510Q	RM510Q-GL

2 5G Network

5G refers to the 5th Generation Mobile Networks or 5th Generation Wireless Systems, and 5G NR (New Radio) is a new radio access technology (RAT) developed by 3GPP for the 5G mobile network. *ITU IMT-2020* defines theoretical downlink peak transmission rate as 20 Gbps and theoretical uplink peak transmission rate as 10 Gbps for 5G.

2.1. Frequency Bands Division

For details about 5G band division, see *3GPP TS 38.101*. 5G defines two sets of frequency bands: one is FR1 (sub-6) with frequency band less than 6 GHz. Currently n1 to n95 (Release 15) belong to FR1. The other one is FR2, also known as millimeter wave (mmWave), with frequency band between 24.25 GHz and 52.6 GHz. Currently n257 to n261 belong to FR2.

2.2. 5G Networking Mode

There are two approaches for 5G networking mode, NSA and SA. 3GPP gives various recommendations on 5G networking mode, including the widely accepted NSA networking mode (Option 3/3a/3x) and SA networking mode (Option 2). Quectel RG50xQ&RM5xxQ series modules support Option 3a/3x and Option 2. ENDC (EUTRA-NR Dual Connectivity), a kind of NSA networking mode, with LTE used as MCG (Master Cell Group) and NR used as SCG (Secondary Cell Group), corresponds to Option 3/3a/3x. In this mode, terminals register to LTE. During the transmission process of a large amount of data,, the 5G cell assumes part of the data transmission, and the 5G cell information can be queried at this time. In contrast, in the case of no data transmission or small amount of data transmission, LTE assumes all data transmission, without 5G involved. At this point, the 5G cell information cannot be queried.

3 5G Network Status Related AT Commands

3.1. AT+COPS Operator Selection

This command returns the current operators and their status, and allows automatic or manual network selection. This chapter only introduces the Read Command under SA and NSA, for more details about this command, see **document [1]**. You can judge whether the SA has been registered on through the value of **<AcT>** returned by the Read Command.

AT+COPS Operator Selection	
Read Command AT+COPS?	Response +COPS: <mode>[,<format>[,<oper>][,<AcT>]] OK If there is any error related to MT functionality: +CME ERROR: <err>

Parameter

<oper>	String type. Operator in format as per <format> .
<mode>	Integer type. <ul style="list-style-type: none"> 0 Automatic operator selection (<oper> field is ignored) 1 Manual operator selection (<oper> field shall be present and <AcT> optionally) 2 Deregister from network 3 Set only <format> (for AT+COPS? Read Command), and do not attempt registration/deregistration (<oper> and <AcT> fields are ignored). This value is invalid in the response of Read Command. 4 Manual/automatic selection. <oper> field shall be presented. If manual selection fails, automatic mode (<mode>=0) will be entered.
<format>	Integer type. The format of <oper> . <ul style="list-style-type: none"> 0 Long format alphanumeric of <oper> which can be up to 16 characters long 1 Short format alphanumeric of <oper> 2 Numeric format of <oper>, GSM location area identification number

<AcT>	Integer type. Access technology selected. Values 4, 5, 6 occur only in the response of Read Command while MS is in data service state and is not intended for the AT+COPS Write Command.
2	UTRAN
4	UTRAN W/HSDPA
5	UTRAN W/HSUPA
6	UTRAN W/HSDPA and HSUPA
7	E-UTRAN
10	E-UTRAN connected to a 5GCN
11	NR connected to 5GCN
12	NG-RAN
13	E-UTRAN-NR dual connectivity
<err>	Error codes. See document [1] for more details.

3.2. AT+QENDC Query EN-DC Status

AT+QENDC Query EN-DC Status	
Test Command	Response
AT+QENDC=?	OK
Execution Command	Response
AT+QENDC	+QENDC: <endc_avl>,<plmn_info_list_r15_avl>,<endc_rstr>,<5G_basic>
	OK
Characteristics	-

Parameter

<endc_avl>	Integer type. Whether the current cell supports EN-DC mode. 0 Not supported 1 Supported
<plmn_info_list_r15_avl>	Integer type. Whether the currently registered PLMN supports the EN-DC mode. 0 Not supported 1 Supported
<endc_rstr>	Integer type. EN-DC capability delivered by the network. 0 Restricted 1 Not restricted
<5G_basic>	Integer type. Whether to support 5G icon information successfully. 0 Not supported

3.3. AT+QENG Query Primary Serving Cell and Neighbour Cell Information

This command is used to query the serving cell and neighboring cell information, for more details about this command, see *document [1]*.

AT+QENG Query Primary Serving Cell and Neighbour Cell Information	
Test Command AT+QENG=?	Response +QENG: (list of supported <cell_type>s) OK
Write Command Query the serving cell information AT+QENG="servingcell"	Response In SA mode: +QENG: "servingcell",<state>,"NR5G-SA",<duplex_mode>,<MCC>,<MNC>,<cellID>,<PCID>,<TAC>,<ARFCN>,<band>,<NR_DL_bandwidth>,<RSRP>,<RSRQ>,<SINR>,<scs>,<srxlev> In EN-DC mode: +QENG: "servingcell",<state> +QENG: "LTE",<is_tdd>,<MCC>,<MNC>,<cellID>,<PCID>,<earfcn>,<freq_band_ind>,<UL_bandwidth>,<DL_bandwidth>,<TAC>,<RSRP>,<RSRQ>,<RSSI>,<SINR>,<CQI>,<tx_power>,<srxlev> +QENG: "NR5G-NSA",<MCC>,<MNC>,<PCID>,<RSRP>,<SINR>,<RSRQ>,<ARFCN>,<band>,<NSA_DL_bandwidth>,<scs> OK
Maximum Response Time	300 ms
Characteristics	-

Parameter

<cell_type>	String type. The information of different cells. "servingcell" The information of 3G/4G/5G serving cells "neighbourcell" The information of 3G/4G neighbor cells
<state>	String type. UE state.

	"SEARCH"	UE is searching but could not (yet) find a suitable 3G/4G/5G cell.
	"LIMSRV"	UE is camping on a cell but has not registered on the network.
	"NOCONN"	UE is camping on a cell and has registered on the network, and it is in idle mode.
	"CONNECT"	UE is camping on a cell and has registered on the network, and a call is in progress.
<is_tdd>		String type. The LTE network mode. "TDD" "FDD"
<MCC>		16-bit unsigned integer. Mobile Country Code (first part of the PLMN code)
<MNC>		16-bit unsigned integer. Mobile Network Code (second part of the PLMN code)
<ARFCN>		Indicates the SA-ARFCN of the cell that has been scanned.
<band>		32-bit unsigned integer. Frequency band in 5G NR SA networking mode.
<NR_DL_bandwidth>		Integer type. DL bandwidth.
	0	5 MHz
	1	10 MHz
	2	15 MHz
	3	20 MHz
	4	25 MHz
	5	30 MHz
	6	40 MHz
	7	50 MHz
	8	60 MHz
	9	80 MHz
	10	90 MHz
	11	100 MHz
	12	200 MHz
	13	400 MHz
<cellID>		Integer type. Cell ID. The parameter determines the 16-bit (GSM) or 28-bit (UMTS) cell ID. Range: 0-0xFFFFFFFF.
<PCID>		Number format. Physical cell ID.
<uarfcn>		The parameter determines the UTRA-ARFCN of the cell that has been scanned.
<earfcn>		The parameter determines the E-UTRA-ARFCN of the cell that has been scanned.
<freq_band_ind>		Integer type. E-UTRA frequency band (see 3GPP 36.101)
<UL_bandwidth>		Integer type. UL bandwidth.
	0	1.4 MHz
	1	3 MHz
	2	5 MHz
	3	10 MHz
	4	15 MHz

<p><DL_bandwidth></p>	<p>5 20 MHz</p> <p>Integer type. DL bandwidth.</p> <p>0 1.4 MHz</p> <p>1 3 MHz</p> <p>2 5 MHz</p> <p>3 10 MHz</p> <p>4 15 MHz</p> <p>5 20 MHz</p>
<p><TAC></p>	<p>Tracking Area Code (see <i>3GPP 23.003 Subclause 19.4.2.3</i>)</p>
<p><RSRP></p>	<p>16-bit signed integer.</p> <p>In LTE mode:</p> <p>It indicates the signal strength of LTE Reference Signal Received Power (see <i>3GPP 36.214</i>). Range: -140 to -44 dBm. The closer the value is to -44, the better the signal is. The closer the value is to -140, the worse the signal is.</p> <p>In 5G NR mode:</p> <p>It indicates the signal strength of 5G NR Reference Signal Received Power. Range: -140 to -44 dBm. The closer the value is to -44, the better the signal is. The closer the value is to -140, the worse the signal is.</p>
<p><RSRQ></p>	<p>16-bit signed integer.</p> <p>In LTE mode:</p> <p>It indicates the signal strength of current LTE Reference Signal Received Quality (see <i>3GPP 36.214</i>). Range: -20 to -3 dB. The closer the value is to -3, the better the signal is. The closer the value is to -20, the worse the signal is.</p> <p>In 5G NR mode:</p> <p>It indicates the signal strength of current 5G NR Reference Signal Received Quality. Range: -20 to -3 dB. The closer the value is to -3, the better the signal is. The closer the value is to -20, the worse the signal is.</p>
<p><RSSI></p>	<p>LTE Received Signal Strength Indication.</p>
<p><SINR></p>	<p>16-bit signed integer.</p> <p>In LTE mode:</p> <p>It indicates LTE SINR (Signal-to-Interface plus Noise Ratio). The conversion formula for actual SINR is $Y = (1/5) \times X \times 10 - 20$ (X is the <SINR> value queried by AT+QENG and Y is the actual value of LTE SINR calculated by the formula). Range: -20 to 30 dB.</p> <p>In 5G NR mode:</p> <p>It indicates the signal of 5G NR SINR. Range: -20 to 30 dB.</p>
<p><CQI></p>	<p>Integer type. Channel Quality Indication. Range: 1-30.</p>
<p><tx_power></p>	<p>TX power value in 1/10 dBm. It is the maximum of all UL channel TX powers. The <tx_power> value is only meaningful when the device is in</p>

	traffic.
<srxlev>	Cell selection RX level value.
<scs>	Integer type. NR sub carrier spacing.
	0 15kHz
	1 30kHz
	2 60kHz
	3 120kHz
	4 240kHz

NOTE

"-" returned by this command indicates the parameter is invalid under current condition.

4 5G Icon Display Rules

4.1. 5G Icon Display Judgement Flow Chart

In order to facilitate end users to accurately determine whether to display a 5G icon, Quectel has summarized the following solution. When using a 5G module, you can refer to this solution to design your own code.

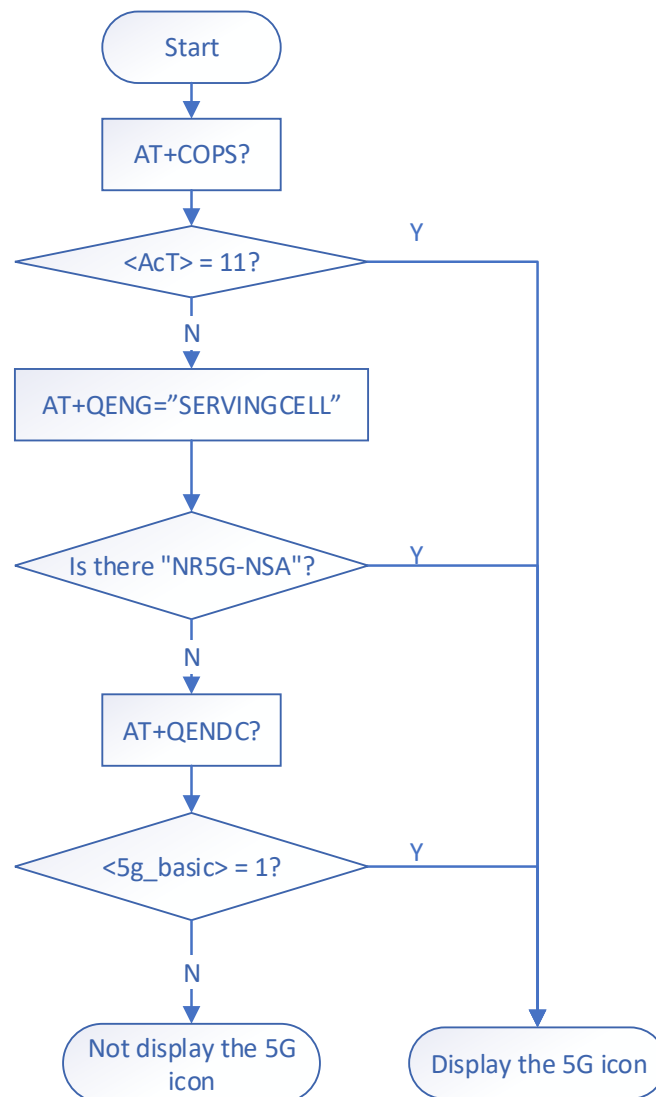

Figure 1: Reference Flow Chart for 5G Icon Display

4.2. 5G Icon Display Rules under NSA

Under NSA, the following conditions decide whether to display the 5G icon:

1. The terminal and subscribers support the ENDC.
 - "DCNR=1" is indicated in Attach Request
 - "RestrictDCNR=0" is indicated in Attach Accept

2. The LTE cell currently camped on supports NSA.
 - "plmn-InfoList-r15" IE is carried in SIB2
 - "upperLayerIndication-r15" in "plmn-InfoList-r15" IE indicates "true"

3. The terminal has successfully accessed the 5G cell and completed the ENDC.
 - The terminal has successfully accessed to 5G cell, and finished the uplink synchronization. 5G cell information can be queried.

Since 5G network popularizes rapidly, there are defects existed in the network configuration and terminals in some areas, especially, the agreement does not clearly stipulate and allow network customization. GSMA does not clearly stipulate the 5G icon display standard under the NSA network, but proposes four display strategies for reference. Operators can choose or combine them according to the local network deployment. Currently, most operators choose to use Config. A + D in the following figure. The standards defined by GSMA are shown in the figure below.

State	Config. A	Config. B	Config. C	Config. D
1 (IDLE under or Connected to LTE cell not supporting NSA)	4G	4G	4G	4G
2 (IDLE under or Connected to LTE cell supporting NSA and no detection of NR coverage)	4G	4G	4G	5G
3 (Connected to LTE only under LTE cell supporting NSA and detection of NR coverage)	4G	4G	5G	5G
4 (IDLE under LTE cell supporting NSA and detection of NR coverage)	4G	5G	5G	5G
5 (Connected to LTE + NR under LTE cell supporting NSA)	5G	5G	5G	5G
6 (IDLE under or connected to NG-RAN while attached to 5G)	5G	5G	5G	5G

Figure 2: 5G Icon Display Strategies Defined by GSMA

From above, different Config. strategies have different 5G icon display requirements. From Config. A to Config. D, 5G icon display requirements are gradually relaxed. State 1 to State 5 define the display standard under NSA; State 6 defines the display standard under SA.

When the UE is in the idle state (IDLE), the 5G status should be judged according to the indicator of upperLayerIndication-r15; when the UE is in the connected state (CONNECTED), the 5G status should be judged according to whether the UE has a 5G SCG. Generally speaking, Config. A + D means referring to the Config. A standard when the UE is in the IDLE state, and referring to the Config. D standard when the UE is in the CONNECTED state.

Since the strategies of each operator are different, the 5G icon display strategy can be configured into the corresponding MBN file according to the requirements of each operator. At present, for the three Chinese operators (CMCC, CT and CU), the strategy is Config. A + D, and for ROW MBN, it is also Config. A + D; for non-Chinese MBNs, it is Config A by default.

4.3. 5G Icon Display Rules under SA

Execute **AT+COPS** to query the network status, if SA has been registered to, it means that 5G icon can be displayed.
